

# Exhibition area at car dealer made accessible with platform lift

***The car dealer Kronsberg in Odense, Denmark, is a family owned company. Kronsberg was established in 1922 and is now run by the fourth generation with three branches on the Danish island Funen. Over the years, they have sold and serviced several, different car brands.***

In December 2015, Autohuset Kronsberg started selling and servicing yet another car brand in their department in Odense. Taking on this new car

brand meant that existing facilities became too small. Therefore, Kronsberg decided to invest in a new, beautiful building of approx. 1500 m<sup>2</sup>, which could accommodate both management facilities and exhibition areas for the existing and new cars.

The new premises are built in split levels between the two exhibition areas that have a level difference of approx. 50 cm. Therefore, it was necessary to create accessibility for people with walking

difficulties and wheelchair users – as well as to meet the Danish regulatory requirements for accessibility in new buildings.

To negotiate the height differences Kronsberg chose the LP7 platform lift from Stepless by Guldmann both because of its elegant and light design but also because of the plug and play construction that has a very low entry level of only 50 mm. This allows for a short ramp and no need for placing the platform in a pit.

**Facts about the LP7 lift:**

- Lifting capacity:** 350 kg
- Lifting height:** 1500 mm
- Ramp height:** 50 mm
- Use:** indoor /outdoor
